Documentos

==

How it works

1.   The field of the document page are filled out with the information previously collect on the Cadastro page / Registration page. These fields are read only.

2.   The user clicks on the upload button and selects a file or takes a photo of a document

3.   The user clicks on OK and the image is sent to the server

4.   On the server return, you get the image file path and you will display it on the screen

5.   the user can send up to 5 images

++

Documentos

https://mobile.finarte.com.br/api/documentos/

Send   :   POST
                 ucod   = 10
                 token   =
                 action = add   (or delete)
                 doc_id = 0   (or the doc_id of image to be deleted)
                 fname   = myimage.jpg
                 imagedata = image base64 encoded

Receive: JSON
                 ret =
                 msg =
                 doc_id = 0
                 imgurl = https://upload.finarte.com.br/users/1/r500_20190310122738.jpg

The msg should be shown as a pop-up on the app

===

PLD / PPE

===

How it works

1. The user will download (link on the image for each PLD/PPE) a pdf which he will fill out by hand/machine

2. The user clicks on the PLD or PPE upload button and selects his filled PLD or PPE pdf / image file which is sent to the server

3. On the server return, you get the pdf/image file path and you will display a green pdf/img icon to the right of the upload button

4. the user could delete the uploaded file and upload a new one

5. after upload complete, display the message received drom the server

==

Artwork

==

How it works

1.   The user creates an artwork with information about the artist, type and size of the artwork etc.
        At this time the image upload button is not visible.

2.   After clicking on the ok button, the app sends the data to the server

3.   now the image upload button appears

4.   Now the user can upload images docs related to this artwork
        Like this we can make sure that images are tied to an artwork
        When creating an artwork you will receive an obra_id which will be used to track the artwork
        and tie the images to it

3	DATA MISSING	A Message box is displayed with msg
9	WRONG TOKEN	User needs to log in again

The user can only add images or documents after the artwork has been saved. Only then the image/doc icons will be shown

changed Data is stored locally after update on server is confirmed (ret = 1);
The msg should be shown as a pop-up on the app

==
IMAGES
==

How it works

1. The user can upload images/docs to the artwork only after the artwork has been created and the upload/photo button is displayed

2. After selecting the image/doc, the app sends the data to the server

3. The user can upload images / docs related to this artwork

4. The server will return the img/doc url, which then can be displayed, the img will have a delete button on the upper right corner where the user can delete that image.

5. The docs will only display the last 2 items available
